

How to Send Downloads to Your Tamagotchi

Sending Downloads to Tamagotchi P's, IDL, ID

Method #1: Compatible IrDA smartphone

Use a compatible IrDA phone to email the downloads to yourself on the phone if using a smartphone (make sure files are unzipped). I made a video tutorial on how to send downloads to the Tamagotchi IDL, but the process is the same for the P's and ID. Watch the tutorial here which uses a Docomo Aquos Phone SH-07E: <https://youtu.be/joL-e08hR6I>

Method #2: Compatible IrDA phone with SD Card

Transfer download files to an SD card from your computer. Insert the SD card into a compatible IrDA phone (Palm Treo 700). Watch a tutorial video by Gotchi Boy: <https://youtu.be/fz6bCKhI2PU>

List of compatible IrDA phones:

Sending Downloads to Tamagotchi Meets/ON

You will need to install the MyMeets App on your computer that has Bluetooth at the following website: <https://tamatown.com/downloads/>

After you install the app on your computer, click on the folder that says "assets". Then click the folder "items".

Copy and paste the download file into the folder "jp". The download file should now be in the app. Open the MyMeets app and it should be loaded. Make sure Bluetooth is enabled on your computer before sending the downloads.

Sending Tamagotchi P's/IDL Downloads to Tamagotchi 4U/4U+

Install Mr. Blinky's Tamagotchi 4U English app on your NFC compatible phone:

<http://mrblinkynet.com/tama/4u/app/>

You will then need to upload the Tamagotchi P's/IDL files to the Tamagotchi 4U custom upload at: <http://mrblinkynet.com/tama/4u/app/upload/>

Please note you cannot upload Tamagotchi P's/IDL accessories and clothes.
